

BI INTUITIVE ECONOMICAL & PERFORMANT

Fully controllable from a **tablet**, it is the most economical injector of the line in terms of workplace and produces around **4000 small and medium sized pieces** per day, with the help of **one or two operators**.

The BI INTUITIVE injector is characterized by **two independent non-expandable workstations** that allow to create light and very thin objects, maintaining their weight over time.

Two Android tablets are the control unit with **specially developed apps** that allow you to **save recipes with photos and manage and control production orders**. Its interconnect-ability to the outside world makes it compatible for **Industry 4.0**.

It is equipped with a transparent melting tank with a constant vacuum system, digital sensors to control the pressures that always allow the tablet to display the graph of the vacuum on the molds during injection, RFID readers, 8 cmc injection syringes with final temperature regulation and self-centering clamps with 120x90mm plates.
